## Running Go-global Relay Server in cluster

Posted by Wolfram - 2005/12/09 13:31

---

If i assemble a cluster (MCS, Veritas or another cluster) to make automatic fail over among two relay servers how i can configure go global to recognize a virtual name of relay server :?:

Any sugestions :?:

=====

Hello,

GraphOn is already working directly with Elosoft on this issue and we have been communicating through email. I will forward that email to you for your information.

Regards,  
Willo
