
High availability on relay server

Posted by Wolfram - 2005/12/21 08:29

In businesses critical where we require high availability of services the redundancy of the server of connections - RELAY SERVER - is inevitable.

The Go Global allow the redundancy of the relay server operate in cluster active duty / stand-by, only the ideal is that the redundancy between the relay servers be active duty / active duty. In this environment is inevitable avoid the fall of the users connection in case of fail of one relay server.
