
Desktop Background Image (Wallpaper)

Posted by Bob Drury - 2006/08/29 14:38

I would like to see the ability to have a custom wallpaper for the ActiveX GG Client Desktop Screen. This should be implemented to allow multiple clients to have their own wallpaper. This could be stored in a user 'profile' or possibly implemented via a logon script.

As I understand it, the GG Client currently allows only background colors, and text colors to be selected - no support for wallpapers.

If I am wrong, please point me in the right direction.

P.S> I would suggest supporting JPG files as they are small/compact and are more appropriate for the thin client philosophy.
(As opposed to chunky BMP files...)

Thanks in Advance,

-Bob.
