
GOLD: How can I prevent users from suspending sess

Posted by troym - 2003/10/17 11:33

The following parameters affect the startup of the "gold" (GraphOn Login Daemon) process and should be placed in the goglobalux startup script, or into `${GOGLOBAL_ROOT}/etc/gold.conf`, with one option per line.

-no_suspend: this option disables the automatic suspension of sessions that are ungracefully disconnected.

-no_explicit_suspend: (in version 2.1 and later) this option disables the ability of the user to request a session be suspended.

-max_suspended_age: this option specifies the amount of time, in minutes, that sessions will be kept suspended. The default is "-1", meaning "forever".

To prevent any and all suspended sessions, use both -no_suspend and -no_explicit_suspend.

To prevent users from suspending sessions, but allow "emergency" use (for example, in the case of a network outage), use only -no_explicit_suspend.
