
ggtn.exe - Syntax of the command for the -m option

Posted by beva - 2007/05/07 02:43

Hello Community,

I am looking now for the Correct Syntax of the Command file loadable into ggtn.exe with the Command line parameter -m

usage: ggtn.exe [options] [hostname]

options:

...

...

...

-m <file> run commands from file

...

...

It would further improve my effort to automate tunnel building (over more than one hop) with ggtn.

thanks

=====
