
Mac clients for Go Global

Posted by Liger - 2007/07/04 08:09

Hello.

Am trying to set up Mac clients to a windows 2003 go global server. Have followed the instructions for Go Global for Windows Mac OS X Client Version 3.1.2

But when I run GGW and enter the ip address of the server it fails to connect to the specified server saying please verify that the server address is correct.

I have installed the X11 Library but that makes no difference as does trying to connect to the server from the X11 Terminal Window.

The Mac os version is 10.4.8.

We originally did get the server working way back in Feburary this year but since then had a problem with the licencing and had to upgrade the server. Now I can no longer get any mac client to access it.

All help greatfully recieved thankyou in advance.

Calvin

Please ignore this.

I downloaded the latest software client from your site and that fixed the problem.

Cheers

Calvin
