
Web client cutting off the screen resolution

Posted by fabianch - 2008/04/28 04:45

We have had this issue also with the Linux Native Client and it was resolved by starting GGW with -f parameter. We are adding web access to the servers, and it cuts the screen almost always, is there a way to force the web access to run in 1024x768, or in full screen?
