
\\"unsupported\\" message in license.log

Posted by Piotr Zborowski - 2008/04/28 10:09

I keep getting this message in license.log file:

```
18:22:22 (blm) UNSUPPORTED: "session" (31DAC42C3A61) SYSTEM@m-se (License server system does not support this feature. (-18,327:10054 ""))
```

Everything seems to be working fine, but does this message mean that something is not correctly configured?
