
Many Error Messages

Posted by Enkerli - 2008/05/08 05:15

Hello!

I have a question. Can someone tell me if this message is important and how i can fix this or suppress the messages? Because my /var/adm/message file is spamed full with this message. 120 Entries at once and this all 1,5 hours.

Running GoGlobal 2_1_5_732 on a Sun Sparc Solaris 9 machine.

Thanks!

Enkerli

I suspect this is simply an informative message. GO-Global will try to allocate a DISPLAY number and skips ahead if one is taken.

Not sure how many users you have but you might review how many suspended sessions & related processes are actually running. Users may not resume existing sessions and simply start a new session which may cause a high number of DISPLAY numbers to be allocated.

Thanks for the answer!

Can you tell me how i can see suspended sessions? there are just 5-10 users logged in.
