## ClearType on server

Posted by bensykes - 2008/05/09 11:23

---

When ClearType is used on the GO-Global Windows server, does that font smoothing make its way to the client also? I suspect it might only be a matter of setting it up on the Windows server correctly (my test system won't allow that at the moment). But I seem to remember that WTS only allows that with Vista on the server - so thought it might be a consideration here also. Thanks for the help -
