
RSA Security token

Posted by tejo - 2008/05/18 06:48

hi,

Recently we have implemented your Graphon Go Global application, which is really a great application. I have a question, does your software support the "RSA SecurID Tokens for Authentication". With this software from RSA a much more secure authentication could be done from the remote users, like stolen username passwords will be greatly reduced.

regards,

Tejo Augustine
