
Serial Port COM10

Posted by Fernando_Daruma - 2008/07/30 13:31

Good Afternoon!,

I have a question, please how Can I connect a print using my COM10 (Client)? I have tested almost ALL COM, until 10, but When I'm gonna use COM10 I lost my signal, I can't use.

If I try locally I can use until COM47, or using WTS (2003) until COM32, but When I'm usin' Go-Global, I can use only until COM9 :(

Anyone Can Help me PLZ!

Fernando. :blink:

Hi there,

Above COM10 are not named COM10. They are named \\.\COM10.

Try use \\.\com10 instead com10.

Thank you.

Have a nice day.
