## Error on login

Posted by Mike - 2008/09/17 02:15

---

Hi there,

We have a couple of users who when logging on to their sessions are getting the error 'No applications, no sessions.'

The servers they are logging onto have recently been migrated to a different location, i.e. there was a system shutdown, start-up. These users were able to login to the server before the migration.

Most other users are able to login fine at present so therefore the Go Global server / database appear to be working fine too.

I believe we are using version 2.1. I am not sure where the problem is. I have attached the image of the error message.

Any assistance with this will be appreciated.

Many thanks

Mike.:) <http://www.graphon.com/images/fbfiles/images/error-9fb20929240a7849ffa47365d89f4b7b.JPG>

Mike,

Check the permission on your license.dat file. Make sure the license file permissions are set so all users can read the file. A 644 permission setting is minimal.
