
full screen to second (non primary) monitor

Posted by mdrench - 2008/10/07 13:37

I am using the GO-Global for UNIX client v2.2.9 for Windows XP. I have two monitors connected to my computer, of different resolutions, and I would like to open a session to full screen, without borders on the second (non-primary) monitor.

Unfortunately, the session always seems to open on the primary monitor. If I select the "Enclose session frame in borders" option, I can move the session window to the other monitor. When that option is not checked, I can't find a way to move the session window after it is opened.

Is it possible to do this?

Thanks,
mdr
