
Error: License management not functional

Posted by Erik - 2004/07/08 12:09

When using an older 2.0 license with a 2.1 GO-Global server, you will see the following error when starting the goglobalux server:

gold: license management not functional, startup aborted.

A likely cause is that another program is listening on TCP port 491 or 791

This issue can be resolved by obtaining & installing a 2.1 (demo) license from: <http://license.graphon.com/>

You can also obtain upgraded licenses for no charge if your maintenance agreement is current by completing the upgrade request form at: <http://www.graphon.com/support/unixv21upgrade.shtml>.
