
How can I save or backup my application settings?

Posted by Erik - 2003/10/20 18:20

Q. I need to uninstall GO-Global and then reinstall it on my server. Will I need to publish my applications again in the Cluster Manager afterward?

A. No, you don't need to re-publish the applications in the Cluster Manager if you export the appropriate registry entry before the uninstall:

Run regedt32.

Go to HKLM\Software\Graphon\Bridges\1.0.0\AppServer\InstalledApps

Click on 'Registry' and choose 'Export Registry File' -- save to any filename you want.

Then after uninstalling and re-installing GO-Global, reboot the server. Then just double-click on the registry file that you saved. After acknowledging the prompts, stop | start the GO-Global application publishing service. Check the Cluster Manager – the applications will be published.
