GG for Solaris 9 x_86 ? or at least plan one for Sol 10 x86

How about a GG host so we can also use the new Sun AMD Opeteron x86 servers with GG uX ?

I am a great fan of GG and we love here at VZWLess in IT cust care dept !

We may be exploring the Sun AMD Operton pizza boxes SOI 9/10 :idea: for Web/app/dev db servers especially now since Oracle has release Oracle 10.1.X on Sol 9 X86 ! :?:

William,

Thanks for the suggestion. We're looking at all viable platforms and Solaris x86 certain falls in that category. Internally, we've always liked Solaris x86 so it becomes a matter of customer demand and the ability to support the platform.

Stay tuned!

-Erik
