## Relay structure

Posted by jack - 2005/01/03 20:50

---

When use Relay server.All the dependent application server can not run without Relay server.All the LAN or intranet user can not connect to dependent application server directly,must build another independent application server.End user will think that cost up....

Relay server is a very good ideal function.If dependent server has it's loadbalance it's self and can let user connect directly.That will make Go-Global perfect.
