
features of go-global

Posted by wavo99 - 2005/01/10 15:58

Hi,

I am trying to find information on the features of Go-Global. I read whats online and it says that Go-Global publishes your applications. Does that mean you can not access the whole desktop if you wanted to. Also, will you be able to transfer files from one place to the next, kind of like FTP. Thanks.

Not sure which product you are inquiring about but...

GO-Global for Windows publishes only applications so user access to the remote desktop is restricted.

GO-Global for UNIX allows you to access the desktop as well as publish a single application.

Both products allow file transfer through either mapped network drives or via FTP.
