
What are the Cybersafe Initialization messages?

Posted by Erik - 2005/02/24 12:24

If you're seeing "Cybersafe Initialization failed" messages during system startup or in the syslog file, you can safely ignore them. These messages are informational only and indicate that Cybersafe authentication is, in fact, not being utilized.

```
gold: gold: Cybersafe Initialization failed: unable to load library /usr/local/graphon/lib/libcybersafeauth.  
so: ld.so.1: /usr/local/graphon/bin/gold: fatal: relocation error: file /usr/local/graphon/lib/libcybersafeauth.so: symbol  
csf_gss_detect_smartcard: referenced symbol not found
```
