
client version mismatch on java client

Posted by deal - 2003/11/05 15:37

I recently upgraded to GoGlobalUX 2.1, but if I try to run the java client I get an error dialog with the following message:

```
A version mismatch has occurred.  
Client protocol version: 20012  
Server protocol version: 20013
```

Initially, after installing 2.1 I had forgotten to copy over the contents of the /usr/local/graphon/htdocs directory to the htdocs root of my web server. And then I got a similar message, but with an even earlier (older) version of the client protocol. But even after copying the htdocs files over, there is still a mismatch.

This is a confirmed issue that was recently found. A fix is not yet available but we will soon provide an update to the Java client.

I am attaching the tested Java client that works with the v2.1 server.

Please let us know if you have any problems with it.

Thanks,
Troy

I am attaching the tested Java client that works with the v2.1 server.

Thanks. The new download appears to have resolved the issue.
