

## Goldmine Menus

Posted by billt - 2003/12/05 18:13

---

We've noticed that when we run Goldmine from a workstation on the server, we have all the menu choices, but when we run it under GoGlobal, we seem to have lost several of the menu selections.

We have run both version 5.7 and 6.0 and have the same issue.

Any suggestions.

Goldmine blocks certain menu selections when run through iGoldmine or GO-Global. If you need more information please submit a problem report with the specific menu selections and we can determine if it is functioning correctly.

i am having the exact same problem. one of the options that is not available is the merge/purge option. i can't access any of those options, and it is desperately needed.

I've been told by FrontRange that GoldMine 6.7 has support for the missing merge/purge features. I'd appreciate if someone (who has access to the new version) could verify that.

## goldmine missing toolbar items

Posted by Wallis - 2005/03/09 13:33

---

I have tested this issue with Goldmine 6.7 and Merge/Purge is not a toolbar option in Goldmine 6.7 through Go Global. I ensured I was logged in as a master user to Goldmine.
